

General marking guidance

These notes offer general guidance, but the specific notes for examiners appertaining to individual questions take precedence.

- 1 All candidates must receive the same treatment. Examiners must mark the last candidate in exactly the same way as they mark the first.

Where some judgement is required, mark schemes will provide the principles by which marks will be awarded; exemplification/indicative content will not be exhaustive. When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the response should be sent to review.

- 2 All the marks on the mark scheme are designed to be awarded; mark schemes should be applied positively. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme. If there is a wrong answer (or no answer) indicated on the answer line always check the working in the body of the script (and on any diagrams), and award any marks appropriate from the mark scheme.

Questions where working is not required: In general, the correct answer should be given full marks.

Questions that specifically require working: In general, candidates who do not show working on this type of question will get no marks – full details will be given in the mark scheme for each individual question.

- 3 **Crossed out work**

This should be marked **unless** the candidate has replaced it with an alternative response.

- 4 **Choice of method**

If there is a choice of methods shown, mark the method that leads to the answer given on the answer line.

If no answer appears on the answer line, mark both methods **then award the lower number of marks.**

- 5 **Incorrect method**

If it is clear from the working that the “correct” answer has been obtained from incorrect working, award 0 marks. Send the response to review for your Team Leader to check.

- 6 **Follow through marks**

Follow through marks which involve a single stage calculation can be awarded without working as you can check the answer, but if ambiguous do not award.

Follow through marks which involve more than one stage of calculation can only be awarded on sight of the relevant working, even if it appears obvious that there is only one way you could get the answer given.

- 7 Ignoring subsequent work**
It is appropriate to ignore subsequent work when the additional work does not change the answer in a way that is inappropriate for the question or its context. (eg. an incorrectly cancelled fraction when the unsimplified fraction would gain full marks).
It is not appropriate to ignore subsequent work when the additional work essentially makes the answer incorrect (eg. incorrect algebraic simplification).
- 11 Number in brackets after a calculation**
Where there is a number in brackets after a calculation E.g. $2 \times 6 (=12)$ then the mark can be awarded **either** for the correct method, implied by the calculation **or** for the correct answer to the calculation.
- 12 Use of inverted commas**
Some numbers in the mark scheme will appear inside inverted commas E.g. “12” $\times 50$; the number in inverted commas cannot be any number – it must come from a correct method or process but the candidate may make an arithmetic error in their working.
- 13 Word in square brackets**
Where a word is used in square brackets E.g. [area] $\times 1.5$: the value used for [area] does **not** have to come from a correct method or process but is the value that the candidate believes is the area. If there are any constraints on the value that can be used, details will be given in the mark scheme.
- 14 Misread**
If a candidate misreads a number from the question. Eg. uses 252 instead of 255; method or process marks may be awarded provided the question has not been simplified. Examiners should send any instance of a suspected misread to review.

Paper: 1MA1/2H					
Question	Answer	Mark	Mark scheme	Additional guidance	
5	No (supported)	P1	calculates area of trapezium eg $\frac{1}{2} \times 7 \times (10+16)$ (= 91)		[area of trapezium] needs to be clearly stated if the process of finding the area is not clear
		P1	for division by coverage eg $\div 2$ or [area of trapezium] $\div 2$ (= 45.5) or process to find coverage per tin eg 5×2 (= 10)	for process to find number of tins bought eg $160 \div 16.99 = 9$ tins	
		P1	for division to find the number of tins eg $\div 5$ or “45.5” $\div 5$ (= 9.1) or [area of trapezium] $\div$ “10” (= 9.1)	for using whole no. of tins to find total litres eg 9×5 (= 45)	
		P1	(dep on at least P2) for a process to multiply a whole number of tins (rounded up) by 16.99	(dep on at least P2) for a process to find the total coverage eg “45” $\times 2$ (= 90)	
		C1	for ‘No’ supported by correct figures eg 169.9 or 90 and 91		

Guidance on the use of abbreviations within this mark scheme

M	method mark awarded for a correct method or partial method
P	process mark awarded for a correct process as part of a problem solving question
A	accuracy mark (awarded after a correct method or process; if no method or process is seen then full marks for the question are implied but see individual mark schemes for more details)
C	communication mark awarded for a fully correct statement(s) with no contradiction or ambiguity
B	unconditional accuracy mark (no method needed)
oe	or equivalent
cao	correct answer only
ft	follow through (when appropriate as per mark scheme)
sc	special case
dep	dependent (on a previous mark)
indep	independent
awrt	answer which rounds to
isw	ignore subsequent working

Documented scheme clarification

Original wording

There must be a conclusion ("No" or equivalent wording) including the figure 169.9 and working showing processes followed.

Correction / interpretation

For Q5 C1, accept 'No' supported by correct working and either $\text{GBP } 169.90 > \text{GBP } 160$, or affordable coverage $90 \text{ m}^2 < \text{required area } 91 \text{ m}^2$. The figure 169.9 is not required for the coverage route.

Reason

Senior adjudication clarification: the C1 criterion explicitly permits '169.9 or 90 and 91', and the process-mark column supplies both cost and affordable-coverage routes. $\text{Area} = (1/2) * 7 * (10 + 16) = 91 \text{ m}^2$. Ten tins cost $\text{GBP } 169.90$; the budget buys only nine tins, covering $9 * 5 * 2 = 90 \text{ m}^2$. Both routes correctly establish No. The additional guidance's unconditional requirement for 169.9 is a
