6 Here is a list of numbers.

12 15 14 17 22 19 13

Bridgit says,

"To work out the median you find the middle number,
so the median of these numbers is 17"

Bridgit's answer is **not** correct.

(a) What is wrong with Bridgit's method?

She must put the numbers in order first.

12, 13, 14, 15, 17, 19, 22: the median is 15.

1 mark
Explain the missing ordering step

(1)

(b) Work out the range of the numbers in the list.

Range = largest – smallest = 22 – 12 = 10

1 mark
Subtract the two extremes

1 mark
Correct range

10

(2)

(c) Work out the mean of the numbers in the list.

Total = 12 + 15 + 14 + 17 + 22 + 19 + 13 = 112

Mean = 112 ÷ 7 = 16

1 mark
Add all seven, then divide by 7

1 mark
Correct mean

16

(2)

(Total for Question 6 is 5 marks)
