**1** $\mathscr{E}$ = {odd numbers less than 30}
$A$ = {3, 9, 15, 21, 27}
$B$ = {5, 15, 25}

(a) Complete the Venn diagram to represent this information.

**1 mark**
Label A and B

**1 mark**
Only 15
in the overlap

**1 mark**
Correct entries
in another region

**1 mark**
All numbers
correctly placed

**(4)**

A number is chosen at random from the universal set, $\mathscr{E}$.

(b) What is the probability that the number is in the set $A \cup B$?

The union means A or B, including the overlap.

7 numbers in the union; 15 in the universal set.

**1 mark**
Use a count from the Venn diagram

$\frac{7}{15}$

**1 mark**
Correct probability

**(2)**

**(Total for Question 1 is 6 marks)**
