19 Solve $2x^2 + 3x - 2 > 0$

×	x	$+2$
$2x$	$2x^2$	$+4x$
-1	$-x$	-2

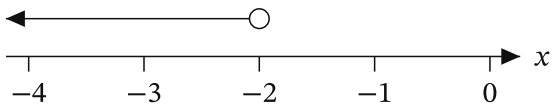

$2x^2 + 3x - 2 = (2x - 1)(x + 2)$

1 mark
Factorise the quadratic

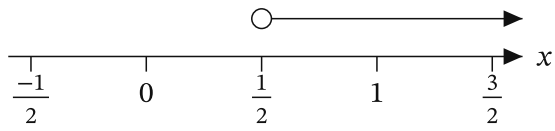

Roots: $x = -2$ or $x = \frac{1}{2}$.

1 mark
Both boundary values

The upward-opening quadratic is positive outside its roots.

or

$x < -2$ or $x > \frac{1}{2}$

1 mark
Strict inequality: exclude both roots

(Total for Question 19 is 3 marks)
