12 A shop sells desktop computers, laptops and tablets.

The composite bar chart shows information about sales over the last three years.

(a) Write down the number of desktop computers sold in 2015

1 mark
Read the black section in 2015

100

(1)

(b) Work out the total number of laptops sold in the 3 years.

Laptops: 260 – 100 = 160; 340 – 120 = 220;

440 – 160 = 280. Total = 160 + 220 + 280 = 660.

1 mark
Read section heights

1 mark
Add all three differences

1 mark
660

(3)

(c) State the item that had the greatest increase in sales over the 3 years.
Give a reason for your answer.

Tablets: 340 – 60 = 280, the greatest increase.

Laptops increased by 120; desktops by 60.

(2)

1 mark
Identify tablets

1 mark
Compare the increases in sales

Alex says,

> "In 2017, more tablets were sold than desktop computers. This means the shop makes more profit from the sale of tablets than from the sale of desktop computers."

(d) Is Alex correct?
You must justify your answer.

No. The chart gives numbers sold, but no costs or selling prices.

Profit per tablet could be lower than profit per desktop computer.

1 mark
Sales quantities alone cannot establish profit

(1)

(Total for Question 12 is 7 marks)
