14 Gavin, Harry and Isabel each earn the same monthly salary.

Each month,

Gavin **saves** 28% of his salary and spends the rest of his salary

Harry spends $\frac{3}{4}$ of his salary and **saves** the rest of his salary

the amount of salary Isabel saves : the amount of salary she spends = 3 : 7

Work out who saves the most of their salary each month.
You must show how you get your answer.

Compare the percentage each person saves.

Gavin saves 28%.

Harry saves $1 - \frac{3}{4} = \frac{1}{4} = 25\%$.

1 mark
Find the fraction Harry saves

Isabel: total parts = 3 + 7 = 10; P means percent.

	Parts	P
	10	100
÷10	1	10
×3	3	30

1 mark
Use 3 saved parts out of 10

28% < 30% and 25% < 30%

1 mark
Correct comparable percentages

Isabel saves the most.

1 mark
Correct comparison

(Total for Question 14 is 4 marks)
