8 (a) Find the value of $\sqrt{1.44 \times 3.61}$

$\sqrt{(1.44 \times 3.61)} = \sqrt{5.1984} = 2.28$

1 mark
Take the square root of the entire product

2.28
(1)

(b) Find the value of $(3.54 - 0.96)^2 - 4.096$

$3.54 - 0.96 = 2.58$

$2.58^2 = 6.6564$

$6.6564 - 4.096 = 2.5604$

2 marks total
Keep all calculator digits; evaluate brackets first

2.5604
(2)

(Total for Question 8 is 3 marks)
