11 The table shows the costs of sending a parcel by the Express service and by the Rapid service.

Type of service	Cost
Express	£15.25
Rapid	£35.38

Brendan has to send 12 parcels.
It will be cheaper to send the parcels by the Express service than by the Rapid service.

(a) How much cheaper?

Saving per parcel = 35.38 − 15.25 = £20.13

1 mark
Find the difference for one parcel.

	Parcels	Saving (GBP)	
	1	20.13	
×12			×12
	12	241.56	

1 mark
Multiply by 12.

1 mark
£241.56 cheaper.

£ 241.56

(3)

Luke wants to send 21 parcels by the Express service.

He does the calculation $20 \times £15 = £300$ to estimate the cost.

(b) Explain why Luke's calculation shows the actual cost will be more than £300

Both figures were rounded down:
20 < 21 and £15 < £15.25, so the product
£300 is less than the actual cost.

(1)

1 mark
Explain that both numbers were reduced.

(Total for Question 11 is 4 marks)
