19 *ABD* is a right-angled triangle.

C is the point on *BD* such that angle *ACB* = 90°.

Prove that triangle *ABD* is similar to triangle *CBA*.

Angle BAD = angle BCA = 90° (given).

1 mark
Equal right angles

Angle ABD = angle CBA (common angle at B).

The remaining angles BDA and CAB are equal, since each triangle has angle sum 180°.

1 mark
All relevant angles with reasons

Therefore triangle ABD is similar to triangle CBA (AAA).

1 mark
Similarity concluded

(Total for Question 19 is 3 marks)
