21 The table shows information about the heights of 60 trees.

Height (h metres)	Frequency
$0 < h \leqslant 4$	13
$4 < h \leqslant 8$	24
$8 < h \leqslant 12$	15
$12 < h \leqslant 16$	6
$16 < h \leqslant 20$	2

Jacob drew this frequency polygon for the information in the table.
The frequency polygon is **not** correct.

Write down **two** things that are wrong with the frequency polygon.

1 Plot midpoints 2, 6, 10, 14, 18, not class ends.

1 mark
Class midpoints

2 Join points with straight segments, not a curve.

1 mark
Straight segments

(Total for Question 21 is 2 marks)
