23

ABCDE is a regular pentagon.
BCF and *EDF* are straight lines.

Work out the size of angle *CFD*.
You must show how you get your answer.

Interior angle = (5 – 2) × 180° ÷ 5 = 108°.

1 mark
Find pentagon angle

At C and D: 180° – 108° = 72°

because BCF and EDF are straight lines.

1 mark
Use both 72° angles

Angle CFD = 180° – 72° – 72° = 36°

because angles in triangle CFD add to 180°.

1 mark
36° °

(Total for Question 23 is 3 marks)
