22 It takes 12 men 5 days to complete a job.

(a) Work out how many days it would take 3 men to complete the same job.

12 × 5 = 60 worker-days.

3 men need60 ÷ 3 = 20 days.

1 mark
Same total work

1 mark
20 days

(2)

(b) (i) State one assumption you made in working out your answer.

Each man works at the same constant rate.

1 mark
Constant equal rates

(1)

(ii) How will your answer be affected if your assumption is **not** correct?

If they work more slowly, the job takes longer;

if faster, it takes fewer than20 days.

1 mark
Rate and time change oppositely

(1)

(Total for Question 22 is 4 marks)
