5 It takes 12 men 5 days to complete a job.

(a) Work out how many days it would take 3 men to complete the same job.

Work = 12 × 5 = 60 person-days.

1 mark
Keep total work fixed

For3 men: 60 ÷ 3 = 20 days.

1 mark
20 days

(2)

(b) (i) State one assumption you made in working out your answer.

Each man works at the same constant rate.

1 mark
Equal constant rates

(1)

(ii) How will your answer be affected if your assumption is **not** correct?

A slower rate means more than20 days;

1 mark
Direction linked to rate

a faster rate means fewer than20 days.

(1)

(Total for Question 5 is 4 marks)
