12 This accurate scale drawing shows two ports, **A** and **B**.

Scale: 1 cm represents 10 miles.

A boat takes 5 hours to sail directly from **A** to **B**.

Calculate the boat's average speed.
You must show all your working.

Measured AB ≈ 7.5 cm at native scale.

1 mark
7.5cm measurement

Real distance = 7.5 × 10 = 75 miles.

1 mark
Scale, then divide by5hours

Average speed = 75 ÷ 5 = 15 mph.

1 mark
15mph

..... mph

(Total for Question 12 is 3 marks)
