13 Oliver wants to buy some stickers.
He only has a £10 note.

Each packet of stickers costs £1.29
Oliver buys as many packets of stickers as possible.

(a) Work out how much change Oliver should get from the £10 note.

£10 ÷ £1.29 = 7.75…; buy7 whole packets.

1 mark
Maximum7 packets

7 × £1.29 = £9.03; 8 × £1.29 = £10.32 > £10.

1 mark
Subtract7-packet cost

Change = £10 – £9.03 = £0.97.

1 mark
£ £0.97

(3)

Jessica also wants to buy some stickers.
There are 6 stickers in each packet.
Jessica works out that she can buy exactly 28 stickers.

(b) Is Jessica correct?
Justify your answer.

No. Packets give multiples of6 stickers.

1 mark
28 not multiple of6

28 is not a multiple of6 (24 < 28 < 30).
