5 (a) Solve $2(x + 1) = 8$

$2(x + 1) = 8$

$\div 2 \qquad \div 2$

$x + 1 = 4$

$-1 \qquad -1$

1 mark
Divide both sides by2

1 mark
x=3

$x =$ 3

(2)

(b) Solve $3y + 7 = 19$

$3y + 7 = 19$

$-7 \qquad -7$

$3y = 12$

$\div 3 \qquad \div 3$

1 mark
Subtract7

1 mark
y=4

$y =$ 4

(2)

(c) Factorise $6n - 4$

×	3n	-2
2	6n	-4

$6n - 4 = 2(3n - 2)$

1 mark
Common factor2

(1)

(d) Simplify $3cd + 2cd - cd$

$(3 + 2 - 1)cd = 4cd.$

1 mark
4cd

(1)

(Total for Question 5 is 6 marks)
