7 Keri draws a triangle.
She says,

"Two of the angles of my triangle are obtuse."

Keri cannot be correct.
Explain why.

Each obtuse angle is greater than 90°.

Two would already add to more than 180°,

but all three angles of a triangle add to 180°.

2 marks total
Obtuse >90°;
triangle sum 180°

(Total for Question 7 is 2 marks)
