13 (a) Expand and simplify $(x + 2)(2x - 3)(3x + 1)$

×	x	2
$2x$	$2x^2$	$4x$
-3	$-3x$	-6

×	$3x$	1
$2x^2$	$6x^3$	$2x^2$
x	$3x^2$	x
-6	$-18x$	-6

$2x^2 + x - 6$

$6x^3 + 5x^2 - 17x - 6$

1 mark
First two brackets

1 mark
Multiply by3x+1

1 mark
Collect like terms

(3)

(b) Simplify $n^4 \div n^{\frac{1}{2}}$

$n^{\frac{7}{2}}$

Subtract indices: 4 - ½ = 7/2.

1 mark
n to power7/2

(1)

(Total for Question 13 is 4 marks)
