**20** Azmol rolls a biased dice and spins a biased coin.

The probability that the coin will land on Heads is 0.55
The probability that the dice will land on 6 and the coin will land on Heads is 0.11

Work out the probability that the dice will land on 6 and the coin will land on Tails.

$P(6) = 0.11 \div 0.55 = 0.2.$

**1 mark**
Divide joint by heads

$P(\text{tails}) = 1 - 0.55 = 0.45.$

**1 mark**
Independent outcomes

$P(6 \text{ and tails}) = 0.2 \times 0.45 = 0.09.$

**1 mark**
0.09

**(Total for Question 20 is 3 marks)**
