25

ABCDEFGH is a regular octagon.
ADJ is a straight line.

angle *BAD* = angle *CDA*

Show that angle *CDJ* = 135°

1 mark
Interior angle method

Interior angle = (8 – 2) × 180° ÷ 8 = 135°.

1 mark
135°

ABCD has angle sum360°. Angles B and C are135°.

Given angle BAD = angle CDA,

1 mark
CDA =45°

so angle CDA = (360° – 135° – 135°) ÷ 2 = 45°.

1 mark
Straight-line angles

ADJ is straight: angle CDJ = 180° – 45° = 135°.

(Total for Question 25 is 4 marks)
