4 Here is a kite.

All angles are measured in degrees.

Work out the value of y.

Opposite kite angles are equal.

1 mark
Equate opposite angles

×	x	−10
5	$5x$	−50

$3x + 10 = 5x - 50$

$-3x$ $-3x$

$10 = 2x - 50$

$+50$ $+50$

$60 = 2x$

$\div 2$ $\div 2$

1 mark
Expand and rearrange

$x = 30$.

Opposite angles: $3 \times 30 + 10 = 100°$ each.

1 mark
Substitute x=30

$y = 360° - 110° - 100° - 100° = 50°$.

1 mark
Quadrilateral sum;50°

(Total for Question 4 is 4 marks)
