13 Judith and Simon are organising different parties at a hotel.

This graph can be used to find the cost, in pounds (£), for different numbers of people.

Judith has £700 to spend on a party.

(a) Find the greatest number of people she can have at her party.

34 people (35 would cost £712.50).

1 mark
Greatest whole number

(1)

Simon is organising a party for 20 people.

(b) Use the graph to find the cost.

20 people → £450.

1 mark
Read from graph

£

(1)

More than 20 people want to go to Simon's party.

(c) Work out the cost for each extra person.

From20 to40 people: cost rises £450 to£800.

1 mark
Change cost ÷ people

(800 – 450) ÷ (40 – 20) = £17.50 per extra person.

1 mark
£17.50
