3 An empty tank is a cylinder of height 5 metres.

Water is poured into the tank at a constant rate.
It takes 4 minutes to fill the tank completely with water.

Malcolm draws this graph to show the depth of water in the tank as water is poured into the tank.

Write down two things wrong with this graph.

1 *Constant filling rate needs one straight line.*

1 mark
Constant gradient

This graph changes gradient part way through.

2 *The final point should be(4minutes,5metres).*

1 mark
End at(4,5)

His graph ends at(5minutes,4metres).

(Total for Question 3 is 2 marks)
