13

In the diagram, ABC is a straight line.

Work out the size of the angle marked x.
You must give a reason for each stage of your working.

Angle ADB = 62°: base angles of an

isosceles triangle are equal (AB = BD).

1 mark
Identify equal base angles.

Angle ABD = 180° – 62° – 62° = 56°:

angles in a triangle add to 180°.

Angle DBC = 180° – 56° = 124°:

angles on a straight line add to 180°.

1 mark
Find remaining angles.

x = 180° – 124° – 25° = 31°:

angles in triangle BDC add to 180°.

2 marks total
31° with all matching reasons.

°

(Total for Question 13 is 4 marks)
