13 Julie has to solve $x^2 - 5x + 2 = 0$
Here is the first line of her working.

$$x = \frac{-5 \pm \sqrt{(-5)^2 - 4 \times 1 \times 2}}{2}$$

The first line of Julie's working is wrong.

What mistake has she made?

The first numerator term is –b.

Here b = –5, so –b = –(–5) = +5.

She wrote –5 where she should have written +5.

1 mark
Sign error before the square root.

(Total for Question 13 is 1 mark)
