**8** (a) Work out an estimate for the value of $\dfrac{58.7^2}{\sqrt{1612}}$

$58.7 \rightarrow 60$; $1612 \rightarrow 1600$

**1 mark**
Round to easy values.

$$\frac{60^2}{\sqrt{1600}} = \frac{3600}{40} = 90$$

**1 mark**
Estimate 90.

.....

**(2)**

(b) Is your answer to part (a) an underestimate or an overestimate?
Give a reason for your answer.

.....

Overestimate: numerator rounded up;

.....

denominator rounded down, so the quotient increases.

**(1)**

**1 mark**
Both changes increase the result.

**(Total for Question 8 is 3 marks)**
