9 A company has a target to reduce the number of its stores by 40 % over the next two years.

At the end of the first year it has reduced the number of its stores by 20 %

If the company is going to reach its target, it must reduce the number of its stores by another P % in the second year

Find the value of P.

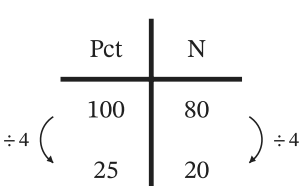

Start with 100 stores.

1 mark
100 → 80 → 60.

After year 1: 80. Target after year 2: 60.

Year 2 reduction = 80 – 60 = 20 stores.

1 mark
Compare 20 with 80.

$P = 25$

1 mark
25%.

.....

(Total for Question 9 is 3 marks)
