17 The diagram shows triangle *ABD* and triangle *BCD*.

ABC is a straight line.
BCD is an equilateral triangle.

Angle *DAB* = 25°

Work out the size of the angle marked *x*.
Give a reason for each stage of your working.

Angle DBC = 60°.

1 mark
Use the equilateral triangle.

An equilateral triangle has three 60° angles.

Angle ABD = 180° – 60° = 120°.

1 mark
Find x using the angle sums.

Angles on the straight line ABC add to 180°.

x = 180° – 120° – 25° = 35°.

2 marks total
35° with reasons linked to each step.

Angles in triangle ABD add to 180°.

..... °

(Total for Question 17 is 4 marks)
