**22** Joe went on holiday to Spain.

His flights cost a total of £320

Joe stayed in an apartment for 3 weeks.
The apartment cost 560 euros each week.

Joe hired a car for 15 days.
The car hire cost 20.16 euros each day.

The exchange rate was £1 = 1.12 euros.

(a) Work out the total cost, in pounds, of the flights, the apartment and the car hire.

| | GBP | EUR | |
|---|---|---|---|
| | 1 | 1.12 | |
| × 500 | | | × 500 |
| | 500 | 560 | |

€560 = £500 per week

€20.16 ÷ 1.12 = £18 per day

**1 mark**
Convert euros into pounds.

Apartment = £500 × 3 = £1500

Car hire = £18 × 15 = £270

**1 mark**
Find apartment and car-hire totals.

Total = £320 + £1500 + £270 = £2090

**1 mark**
Add the flights.

**1 mark**
£2090.

£.....

**(4)**

(b) If there had been more than 1.12 euros to £1, how would this affect your answer to part (a)?

The total cost in pounds would be less.

More euros per £1 means fewer pounds for the same euro costs.

**1 mark**
Lower overall cost.

**(1)**

**(Total for Question 22 is 5 marks)**
