16 The diagram shows a kitchen floor in the shape of a rectangle.

Lynn is going to cover the floor with tiles.

Each tile is a rectangle of side 60 cm by 30 cm.
Each tile costs £4.25

Lynn has £400 to spend on tiles.

Show that she has enough money to buy all the tiles she needs.

Along the length: 540 ÷ 60 = 9 tiles

1 mark
Find a tile count.

Across the width: 300 ÷ 30 = 10 tiles

1 mark
Find both counts.

Tiles needed = 9 × 10 = 90

Cost = 90 × £4.25 = £382.50

1 mark
Find the total cost.

£400 – £382.50 = £17.50 left

So she has enough money.

1 mark
£382.50 < £400.

(Total for Question 16 is 5 marks)
