28 *ABCDE* and *AFGHL* are two regular pentagons.

EAF is a straight line.
EA = *AF*

Work out the size of the angle marked *x*.
You must show all your working.

Exterior angle of a regular pentagon = 360° ÷ 5 = 72°.

Interior angle = 180° – 72° = 108°.

1 mark
Regular pentagon.

Angle EAB = 108° and angle LAF = 108°.

Angle BAF = 180° – 108° = 72° (straight line EAF).

1 mark
Use the straight line.

x = angle LAF – angle BAF = 108° – 72° = 36°.

1 mark
x = 36°.

.....°

(Total for Question 28 is 3 marks)
