10 The cumulative frequency graph shows information about the heights of 60 fir trees.

(a) Use the graph to find an estimate for the median height.

1 mark
Read height at CF30.

Median: CF = 60 ÷ 2 = 30 → 24 m

..... m

(1)

(b) Use the graph to find an estimate for the interquartile range of the heights.

1 mark
Read both quartiles.

Q1: CF15 → 19 m; Q3: CF45 → 27 m

1 mark
Subtract Q1 from Q3.

IQR = 27 – 19 = 8 m

..... m

DO NOT WRITE IN THIS AREA

(c) Use the graph to find an estimate for the percentage of these fir trees that have a height greater than 30 metres.

At 30 m, cumulative frequency ≈ 51.

1 mark
Read the source curve.

Number taller than 30 m = 60 − 51 = 9

1 mark
Use complement;
then divide by all 60.

$$\frac{9}{60} \times 100 = 15\%$$

1 mark
15%.

.....%

(3)

(Total for Question 10 is 6 marks)
