14 The accurate scale drawing shows the positions of two ships, A and B.

1 mark
Clockwise from north.

1 mark
Both bearing rays meet at C.

Scale 1 : 20 000

A ship C is on a bearing of 060° from ship A.
Ship C is also on a bearing of 310° from ship B.

(a) Mark the position of ship C with a cross (×) on the scale diagram.
Label the cross C.

(2)

(b) Work out the real distance between ship A and ship B.
Give your answer in kilometres.

AB measures 9.0 cm on this native-scale drawing.

1 mark
Measure AB.

9 × 20000 = 180000 cm

1 mark
Use the scale.

180000 ÷ 100000 = 1.8 km

1 mark
Convert cm to km.

..... kilometres

(3)

(Total for Question 14 is 5 marks)
