24 The table gives information about the weights, in kg, of 25 babies.

Weight (w kg)	Frequency
$2.5 < w \leqslant 3.0$	4
$3.0 < w \leqslant 3.5$	8
$3.5 < w \leqslant 4.0$	11
$4.0 < w \leqslant 4.5$	2

Work out an estimate for the mean weight.

Midpoints: 2.75, 3.25, 3.75, 4.25

1 mark
Midpoint × frequency.

Products: 2.75 × 4 = 11; 3.25 × 8 = 26

3.75 × 11 = 41.25; 4.25 × 2 = 8.5

Total estimated weight = 86.75 kg

1 mark
Add products;
divide by total frequency.

Estimated mean = 86.75 ÷ 25 = 3.47 kg

1 mark
3.47 kg.

..... kg

(Total for Question 24 is 3 marks)
