12 The box plots give information about the distances a javelin is thrown by 60 male athletes and by 60 female athletes.

(a) Work out the interquartile range for the distances thrown by the male athletes.

1 mark
Read both male quartiles.

IQR = Q3 – Q1 = 46.5 – 35 = 11.5 m

1 mark
11.5 m.

..... m

(2)

Fayha says,

"The box plots show that the male athletes threw the javelin further than the female athletes."

(b) Is Fayha correct?
Give a reason for your answer.

Yes. The male median is higher than the female median,

so the typical male throw is further.

1 mark
Compare the medians.

(1)

(c) Work out an estimate for the number of the female athletes that threw the javelin a distance greater than 33 m.

33 m is the female lower quartile: 75% are above it.

1 mark
Use the upper three quarters.

¾ of 60 = 60 ÷ 4 × 3 = 45 athletes

1 mark
45.

(2)

(Total for Question 12 is 5 marks)
