11 Here are some fractions.

$$\frac{4}{6} \quad \frac{20}{30} \quad \frac{6}{9} \quad \frac{8}{12} \quad \frac{10}{16}$$

One of these fractions is **not** equivalent to $\frac{2}{3}$

(a) Which fraction?

$4 \times 3 = 6 \times 2$; $20 \times 3 = 30 \times 2$

$6 \times 3 = 9 \times 2$; $8 \times 3 = 12 \times 2$

$10 \times 3 = 30$, but $16 \times 2 = 32$

1 mark
The first four equal 2/3.
10/16 does not.

$\frac{10}{16}$

(1)

(b) Work out $\frac{4}{5} - \frac{1}{15}$

$\frac{4}{5} - \frac{1}{15} = \frac{12 - 1}{15} = \frac{11}{15}$

2 marks total
Use denominator 15; subtract the numerators.

(2)

(Total for Question 11 is 3 marks)
