19 The diagram shows a regular hexagon and a parallelogram.

Work out the size of the angle marked x.
You must show all your working.

Parallelogram angle = 180° – 110° = 70°

1 mark
Adjacent angles in a parallelogram add to 180°.

Hexagon exterior angle = 360° ÷ 6 = 60°

Hexagon interior angle = 180° – 60° = 120°

1 mark
Regular hexagon: equal exterior angles.

x = 120° – 70° = 50°

2 marks total
Subtract 70° from the hexagon interior angle.

$x =$ 50 °

(Total for Question 19 is 4 marks)
