20 Solve the simultaneous equations

$$4x + 2y = 3$$
$$x - y = 6$$

$4x + 2y = 3$

$2x - 2y = 12$ (second equation ×2)

1 mark
Add to eliminate y.

$6x = 15$

$x = 2.5$

$2.5 - y = 6$

1 mark
Substitute x into x − y = 6.

$-y = 3.5$, so $y = -3.5$

1 mark
Both values satisfy both original equations.

$x =$ 2.5

$y =$ −3.5

(Total for Question 20 is 3 marks)
