**28** (a) Simplify fully $3x^2y^3 \times 5x^3y$

$3 \times 5 = 15;\ x^2 \times x^3 = x^5;\ y^3 \times y = y^4$

**2 marks total**
Multiply coefficients; add powers for the same base.

$15x^5y^4$

**(2)**

(b) Expand and simplify $(2k + 1)(3k - 4)$

$(2k + 1)(3k - 4)$

$= 6k^2 - 8k + 3k - 4$

$= 6k^2 - 5k - 4$

**2 marks total**
Multiply all four pairs, then collect k terms.

$6k^2 - 5k - 4$

**(2)**

**(Total for Question 28 is 4 marks)**
