10 The table shows information about the marks scored in a test by students in group A.

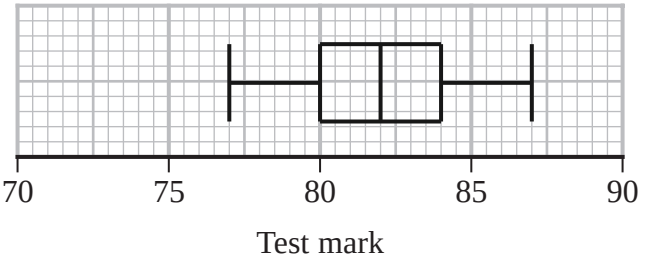

least mark	77
median	82
lower quartile	80
interquartile range	4
range	10

(a) Draw a box plot for this information.

UQ = 80 + 4 = 84

Max = 77 + 10 = 87

Group A

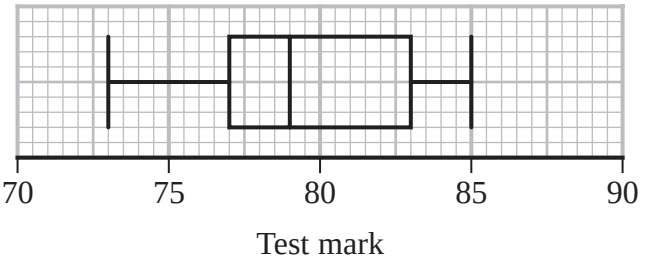

3 marks total

Five values: 77, 80, 82, 84, 87; box and whiskers plotted.

(3)

The box plot below shows information about the marks scored in the test by students in group B.

Group B

(b) Compare the distribution of marks scored by students in group A with the distribution of marks scored by students in group B.

Group A scored higher on average: median 82 vs 79.

1 mark

Compare medians in the test-mark context.

Group A marks were more consistent: IQR 4 vs 6.

1 mark

Compare spread using interquartile ranges.

(2)

(Total for Question 10 is 5 marks)
