25 The table shows the probabilities that a biased dice will land on 1, on 2, on 3, on 4, on 5 and on 6

Number on dice	1	2	3	4	5	6
Probability	0.06	0.15	0.32	0.1	0.24	0.13

Sven rolls the biased dice 400 times.

Work out an estimate for the number of times the dice will land on 2 or on 5

P(2 or 5) = 0.15 + 0.24 = 0.39

Expected number = 400 × 0.39 = 156

2 marks total
Add the mutually exclusive probabilities, then ×400.

156

(Total for Question 25 is 2 marks)
