27 Anaya and Leon each bought a ticket to fly to Poland.
They bought the tickets from different travel companies.

The price of the ticket Anaya bought was $\frac{1}{3}$ less than the normal price of the ticket.
The price that Anaya paid for her ticket was £135

The price of the ticket Leon bought was 40% less than the normal price of the ticket.
The price that Leon paid for his ticket was £126

Anaya says that the normal price of her ticket was less than the normal price of Leon's ticket.

Is Anaya correct?
You must show how you get your answer.

Anaya paid 2 of 3 equal parts: £135

1 part = £135 ÷ 2 = £67.50

1 mark
Find one part of Anaya's normal price.

Normal price = £67.50 × 3 = £202.50

1 mark
Multiply by all three parts.

Leon paid 60%: £126 ÷ 0.60 = £210

1 mark
Divide by the fraction of normal price Leon paid.

YES. £202.50 < £210.

1 mark
Yes, supported by both original prices.

(Total for Question 27 is 4 marks)
