12 There are 80 litres of water in a tank.

The water flows out of the tank at a rate of 125 millilitres per second.

Work out the time, in seconds, that it takes for all of the water to flow out of the tank.

80 litres = 80 × 1000 = 80 000 ml

1 mark
Convert litres to ml.

Time = volume ÷ flow rate

80 000 ÷ 125 = 640 seconds

2 marks total
Divide by millilitres per second.

640 ..... seconds

(Total for Question 12 is 3 marks)
