17 Milk is sold in a shop in two sizes of bottle.

A 4 pint bottle of milk costs £1.08
A 6 pint bottle of milk costs £1.50

Which bottle of milk is the better value for money?
You must show all your working.

4-pint bottle: £1.08 ÷ 4 = £0.27 per pint

1 mark
Find cost per pint.

6-pint bottle: £1.50 ÷ 6 = £0.25 per pint

1 mark
Compare the same quantity: 1 pint.

The 6-pint bottle is better value:

25p per pint is less than 27p per pint.

1 mark
Choose 6 pints, supported by both unit prices.

(Total for Question 17 is 3 marks)
