DO NOT WRITE IN THIS AREA

9 Here are three squares.

The area of square **B** is 25% less than the area of square **A**.
The area of square **C** is 25% less than the area of square **B**.

Find the fraction $\dfrac{\text{area of square } \mathbf{C}}{\text{area of square } \mathbf{A}}$

Each area retains 75% = 3/4.

$$\frac{3}{4} \times \frac{3}{4} = \frac{9}{16}$$

3 marks total
Apply factor3/4 twice.
Do not add the two reductions.

$\frac{9}{16}$

(Total for Question 9 is 3 marks)
