28 (a) Write down the exact value of cos 60°

cos 60° = ½

1 mark
Use the exact special-angle value.

½

(1)

(b) Given that tan $x°$ = 0.7, work out the length of BC.

tan x = opposite ÷ adjacent

$$\frac{BC}{20} = 0.7$$

BC = 20 × 0.7 = 14 cm

2 marks total
Multiply both sides by the adjacent length, 20 cm.

14 cm

(2)

(Total for Question 28 is 3 marks)
