14 The pie chart shows information about how 540 students travel to a college.

Shane thinks that a quarter of the students walk to the college.

(a) Is Shane correct?
You must give a reason for your answer.

No. A quarter corresponds to 360° ÷ 4 = 90°.

The walk sector is 80°, which is smaller.

1 mark
Compare the sector angle with a quarter-turn.

(1)

Raj says,

"The difference between the number of students who cycle to the college and the number of students who travel to the college by bus is less than 50"

(b) Show that Raj is correct.

Cycle – bus: 100° – 70° = 30°

1 mark
Find the angle difference.

Difference = 30 ÷ 360 × 540 = 45 students

1 mark
Use all 540 students.

45 < 50, so Raj is correct.

1 mark
State the comparison after converting angles to counts.

(3)

(Total for Question 14 is 4 marks)
