24 The diagram shows a shape made from a rectangle and a semicircle.

The perimeter of the rectangle is 64 cm.

the length of AB : the length of BC = 3 : 1

(a) Work out the area of the shape.
Give your answer correct to 3 significant figures.

AB + BC = 64 ÷ 2 = 32 cm

1 ratio part = 32 ÷ 4 = 8 cm

AB = 24 cm; BC = 8 cm

Rectangle area = 24 × 8 = 192 cm^2

Radius = 8 ÷ 2 = 4 cm

Semicircle area = ½ × π × 4^2 = 8π cm^2

Total = 192 + 8π = 217.1327... cm^2

1 mark
32 cm is four ratio parts.

1 mark
Use the ratio 3 : 1.

1 mark
Multiply the sides.

1 mark
Half of πr^2, with r = 4 cm.

1 mark
Add the two areas; round to 3 significant figures.

217 cm^2

(5)

The ratio is now reversed.

the length of AB : the length of BC = 1 : 3

(b) How does this affect the area of the shape?
You must give a reason for your answer.

The area increases. The rectangle still has area 24 × 8,

but the semicircle now has diameter 24 cm, not 8 cm.

Its radius is three times as large, so its area is nine times as large.

(1)

1 mark
Only the semicircle grows.

(Total for Question 24 is 6 marks)
