25 Work out $(13.8 \times 10^7) \times (5.4 \times 10^{-12})$
Give your answer as an ordinary number.

$13.8 \times 5.4 = 74.52$

1 mark
Correct numerical product

$10^7 \times 10^{-12} = 10^{-5}$

$74.52 \times 10^{-5} = 74.52 \div 100000 = 0.0007452$

1 mark
Correct ordinary decimal

0.0007452

(Total for Question 25 is 2 marks)
