7

BCD is a straight line.
ABC is a triangle.

Show that triangle *ABC* is an isosceles triangle.
Give a reason for each stage of your working.

Angle BCA = 180° – 117° = 63°

1 mark
Find the internal angle at C

Angles on a straight line add to 180°.

Angle CAB = 180° – 63° – 54° = 63°

1 mark
Find the remaining angle at A

Angles in a triangle add to 180°.

Angles BCA and CAB are equal, so their opposite

sides AB and BC are equal. Therefore ABC is isosceles.

2 marks total
Correct conclusion with both required angle reasons

(Total for Question 7 is 4 marks)
